Restaurant Rush: Stage 2 class diagram (CE/CZ2002 notation)

Stage 2 adds VIPCustomer (turns 4, 10) and CriticCustomer (turn 16).

lossPerTurn()=5, discount()=10% off, chooseItem()=always the priciest item.

lossPerTurn()=12, discount()=none, chooseItem()=random (same rule as RegularCustomer).

Customer: POLYMORPHISM. lossPerTurn(), discount() and chooseItem() are overridden in each subclass, so Waiter/Chef/Restaurant never need an instanceof/type check.
